

PRIVATE AI ON YOUR COMPUTER

A private AI workspace for the work already happening on your computer.

Off Grid AI Desktop brings local intelligence to documents, notes, conversations and tasks, letting you reason over your own context without making the cloud the default place where that context lives.

DESIGNED AROUND REAL WORK

- **Work with your files.** Summarize, compare, rewrite and reason across documents stored on your computer.
- **Carry context forward.** Use memory from earlier work instead of restarting every interaction from zero.
- **Choose your intelligence.** Run models locally and keep control over how your workspace is configured.
- **Stay close to the source.** Bring AI to the information already on the machine instead of moving everything somewhere else.

A DIFFERENT DEFAULT

The computer becomes the AI workspace.

Your files, your local models and your accumulated context sit together. The result is an assistant that can understand the work around it while preserving control over where that information is processed and stored.

HOW TO THINK ABOUT IT
