

FROM PRIVATE CONTEXT TO GOVERNED INTELLIGENCE

Connect intelligence across people, devices, systems and enterprise knowledge.

Off Grid AI combines private intelligence at the edge with a governed enterprise layer. Personal and operational context can remain close to where it is created, while useful signals become available to the people, agents and workflows that need them.

THE ARCHITECTURE

Move intelligence, not everything that created it.

Raw sensitive context does not need to become a central data lake. Off Grid AI is designed so useful derived knowledge can flow while policy, permissions, provenance and human control remain explicit.

WHAT THE LAYER ENABLES
