

PRIVATE AI ON YOUR PHONE

AI that lives on your phone, not in someone else's cloud.

Off Grid AI Mobile brings language, vision, voice and image intelligence directly to the device, so personal context can remain private while still being useful.

WHAT IT GIVES YOU

- **Private by design.** Sensitive prompts, files and context can stay on-device.
- **Multimodal intelligence.** Work naturally across text, images, vision and voice.
- **Persistent context.** Build a useful personal memory without handing that memory to a remote service.
- **Useful anywhere.** Keep core AI capabilities available even when connectivity is poor or intentionally disabled.

THE IDEA

Your phone already holds the context of your life.

Messages, notes, photos, documents, voice and the things you are doing right now all live close to you. Off Grid AI makes that context useful without requiring it to become someone else's data.
